Subject: Fwd: Transport of Nucleur Waste

Part of Records Package / Supplement / Correction

i highly oppose the transportation of nuclear waste across country, especially in light of everything that's happened lately. I want to say "ARE YOU INSANE?" Imagine one mess up, the accident, the national disaster and all the bullshit that goes along with that. can't we find a better way to 'dispose' this stuff? we need to invent something that we can mix with it to neutralize the radioactivity inside of it, but in the meantime, transporting them is unsafe, unefficient, unenvironmental, and is something that I take personal offense to. please find another alternative to this solution. I invite any further communication on this issue from 'the Department' of whoever heck you guys are, which branch of the government you serve.

Campus Community,

A curie is a measure of radioactivity. Scientist work with a fraction of a curie. The Department of Energy wants to ship high level nuclear waste every other day fro the next thirty years on highways and railroads. Each shipment would contain 4.65 million curries each, a number so high it is beyond belief! Add to that acts of terrorism, or accidents and we could have a national disaster. Let's put this into a visual we can all understand: If one train carrying this amount of nuclear waste were to de-rail, or be tampered with, we would be exposed to level of nuclear power, equivalent to 200 Hiroshima Bombs. Please help to stop this by emailing: YMP_SR@YMP.gov or by fax 1-800-967-0739.

Sincerely,

Kara Bohannon
